

1 September 2010

After only 2 years in operation, and with the success of the smaller hot-dip galvanization facility, EEC Galva is proud to announce the successful commissioning of the new and larger galvanization facility. The facility takes advantage of a larger kettle of size 12.5m x 1.5m x 2.7m.

The facility has been developed to fulfill the needs of EEC Galva's current customer base and the growing need for hot-dip galvanization services in the local Egyptian infrastructure market. The facility uses the latest modern technologies and techniques in the galvanization marketplace.
